25X1A* [] Comment. Compared with the previous month the consumption has risen by approximately 17,000 tons. [] This increase is believed to be due to seasonal causes. In November 1950, there was an average daily coal consumption of about 22,000 tons. It is noted that the consumption of hard coal is 15,000 tons greater than in October.

25X1A** [] Comment. This represents a decline of more than 4,000 tons from with the previous month. The decline is believed to be due to a reduction in the volume of Soviet transit shipments through Poland.

*** [] Comment. The consumption of lubricants continued to fall by nearly 25X1 7,000 kg. []
